

Instructions:

Complete the table on the next page, using the questions below to guide you. At the minimum, you must fill in 8/10 boxes, but you are welcome to fill in all if you can. We recognize, however, that you may not be able to find the information needed to answer all questions. Also, consider consulting other sources beyond the company's website, such as news articles in the press. Avoid answering with lengthy paragraphs. Bullet points or brief sentences are acceptable. You will be graded on the quality of your responses.

Navigate to Ontario Brain Institute's list of Portfolio Companies: <https://braininstitute.ca/portfolio-companies>

1. What is the company's name? Where is the company located (startup companies don't always have offices at the start but are often part of business incubators)? How many employees do they have (if available). Provide the URL of the company's website.
2. When was the company founded, who founded it (can be multiple founders), and what was their inspiration for doing so?
3. What is the mission, vision, and/or objectives of the company?
4. Who is the company's target population/end-user (be specific)?
5. What type of solution(s) do they develop or sell (hardware/physical product, software including mobile apps, services, or a mix)?
6. What disease and what gap in the market is this company focussed on addressing (i.e. diagnosis, treatment, management of specific conditions, etc.)
7. Describe one of the company's solutions/products, either currently sold or under development. Is their solution an example of disruptive innovation?
8. If available, who is funding them and how much funding have they received (i.e. university, government, etc.), or is the company partnered or affiliated with any organizations (besides the Ontario Brain Institute)? Check out Crunchbase: <https://www.crunchbase.com>
9. If available, what is the company's future outlook or next steps for expanding their market presence (i.e. clinical trials, applying for regulatory approval, expanding into other provinces or countries, etc.)?
10. Find and describe one current or recent position the company is/was hiring for (include responsibilities of the job and qualifications). If available, pick a position open to undergraduate biomedical engineering students or recent graduates. You may have to consult both the company's career section or popular job websites (i.e. Glassdoor, Indeed, LinkedIn, etc.) for this part. You may also find information on Wellfound (<https://angel.co/candidates/overview>), a startup-specific platform for hiring.
11. Citations and references:
 - a. Avoid making your submission too academic with the use of too many external articles. Cite primary sources as required.
 - b. Hyperlink the company website in the first box. Any additional websites should be hyperlinked following the sentences in which they were used. Alternatively, use Vancouver style referencing for in-text citations and provide references on a separate page for any websites and research articles.
 - c. Avoid the use of ChatGPT or other AI resources. They tend to make up false information with requests like this.

Once you have completed the worksheet, convert it to a PDF and name it according to the following convention: 1EP6_BB5_LastName_FirstName

Submit the PDF to the Avenue to Learn dropbox.

Company Information: - Cove Neuro is a company based in Toronto started by several MD and PhD holders with a background in neuroscience - They have dozens of employees that have research and neuroscience backgrounds - Their core leadership team consists of 4 members, acting as CEO, CTO, Director of R&D, and Director of Business, respectively - The company’s website link is: Cove Neurosciences		Mission, vision, and/or objectives: - Cove’s mission is to bridge the gap between cutting-edge neuroscience research and current neurosurgical techniques by utilizing AI software - Their vision is to eventually standardize a system for analyzing brain imaging data, improving collaboration across healthcare networks - Some of their key objectives include developing software designed for specific neurological diseases and allowing data inputs to come from either a patient or a doctor.	Target population/end user: - The current end user is healthcare systems/networks (ex. SickKids, UHN, etc.) that can implement institutional adoption of Cove’s software - They are also developing an edition of their product that patients can use to understand their status and diagnosis
Founder(s) Information: - Dr. Nardin Samuel is one of the co-founders of Cove and obtained her MD/PhD at UofT, and she has spent many years as a resident physician Nardin Samuel, MD, PhD LinkedIn. - Dr. Irene Harmsen is the other co-founder of Cove and also did her MD/PhD at UofT, subsequently working as a neurosurgery resident at the University of Alberta Irene Harmsen, MD, PhD LinkedIn. - They cited the rapidly evolving nature of the neuroscience field as their primary inspiration for developing Cove, as they wanted to build something that would last in a changing industry			Type of solution(s) developed: - Their flagship product is a software that is able to process, analyze and synthesize a wide range of different data from various brain imaging sources
			What condition(s) and gap is the company addressing: - Cove’s product is compatible with many conditions that affect the brain, including epilepsy, dementia, aneurysms, and strokes. - They are not targeting a gap but rather creating a new service; their product allows different imaging data to be coalesced.
Describe one of the company’s solutions and why it is innovative: - CoveConnect is their primary product; it is software that uses patients’ brain imaging data to create biomarkers that can improve clinical trial/testing conditions - It’s innovative purely because it has never been done before; their product is only possible due to recent AI advancements - Additionally, the team that created it consists of dozens of neuroscience and software experts, furthering validating the uniqueness of their product - Cove is a disruptive innovator because it is a relatively small company that has the potential for widespread adoption, becoming the industry-standard across the country	Funding or partnerships:		Describe a current or recent job posting by the company:
	Future outlook or next steps: - From a commercial aspect, Cove is currently developing software that is more patient-friendly, and uses AI to process imaging data and then return an output that non-specialists can understand - From a research aspect, they are currently conducting research on Epilepsy and brain signals associated with the condition, to better integrate it into their software
