Epineuron Technologies

Dear Mr. Aguirre,

My name is Rasik Sharma, and I am an aspiring biomedical engineer currently in the Integrated Health Sciences and Biomedical Engineering program at McMaster. I am deeply passionate about medical devices, especially those that are novel solutions. This is why I am reaching out to you today to apply for the summer internship role at Epineuron Technologies. I believe that my coursework, in the form of both projects and lab skills, has uniquely prepared me for this position.

In my first-year cell biology course, IBEHS1EP6, I have gained several key wet-lab skills. For example, I've utilized SDS-PAGE procedure to separate proteins by weight, conducted cell assays to study wound healing, and analyzed cell cultures via hemocytometry. Additionally, I have applied what I learned from these lab techniques to propose a novel hydrogel-based therapeutic for osteoporosis. In doing so, I have greatly strengthened my teamwork and collaboration skills as I worked with other students to develop this proposal. Overall, these skills have prepared me to work in a wet-lab environment, like at Epineuron, where I could apply my skills in order to further improve your therapeutic product.

Furthermore, I have experience in developing and prototyping medical devices; in the past, I have modified an ostomy bag based on patient specifications, 3D-printed a custom hip implant, and programmed a clothes-folding board for individuals with arthritis. These experiences demonstrate my technical skills, like Python and AutoCAD, and my cross-disciplinary knowledge by combining health science and engineering principles. Although I am applying for a lab position, my understanding of project design would be invaluable in a startup like yours that focuses on bench-to-market development.

In summary, I know that I would be a strong contributor to your team due to my experiences in lab work and biomedical device design. I hope to hear back from you regarding this opportunity soon.

Sincerely,

Rasik
